

## LISNAGER HOMESTEAD

### History

Lisnagar (named after a castle in Co. Cork, Ireland) was built in 1902 for Edward Twohill. Edward was originally born in Castlelyons, Ireland and emigrated to Australia and settled down with his wife Ellen and ten children. The Twohills were considered a pioneering family.

The beautiful 2 story Victorian style home with wrought iron railings still retains its original features. The rooms have remained untouched for many years therefore history surrounds you as you enter the rooms filled with furniture, clothing, family photographs and family artwork and carvings from the early 1900's.

This grand home is still owned by the original family.

### API Log

API conducted an investigation on a hot and humid night in November 09. With a property in such original state, we had to be careful to block out any pre-suggestion. Only three members of the API Team were aware of the history and previously reported paranormal activity at this property. We deliberately operated this way so there were no pre-suggestive experiences.

Initially team members carried out an initial sweep of the house. API took base readings in all rooms and areas covering both bottom and top floor.

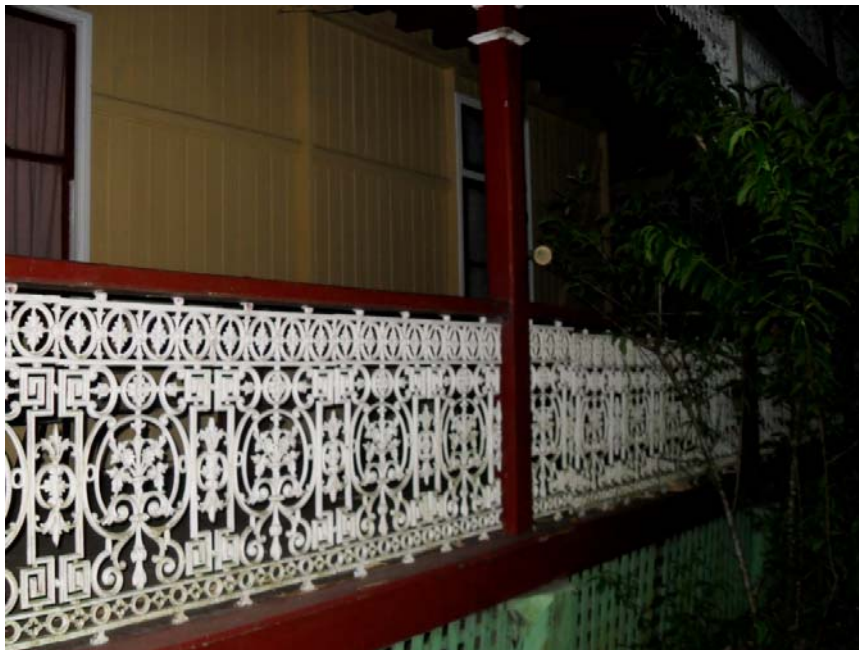

*The house contains the very original fixtures and fittings*

*Rooms contain personal items of the family from early 1900's as well as personal craftwork*

*The children's rooms have stayed exactly as they were*

Madeleine Doherty, Journalist, Coast and Country magazine accompanied API on the night of the investigation.

### **Findings**

Slight but frequent EMF and temperature fluctuations in the Parlour.

Temperature drops of 2c reported in the Children's bedroom. No windows were open in the room.

3x possible EVP's recorded.

### **Conclusion**

It was an interesting evening. There wasn't the expected activity on the EMF meters although we have some interesting EVPs to analyse further.

API had limited time on site at Lisnagar and we would welcome the opportunity to undertake a further investigation sometime in the future.
